

VIAcode Cloud Commander

VIAcode Cloud Commander for Windows 8 lets you easily review, monitor and manage your cloud infrastructure. Initially available for Amazon Web Services, you can use cloud commander to monitor manage all of your AWS instances, including EC2 instances and EBS storages. Cloud Commander is the only mobile console that allows you to check the operating and health status for every EC2 instance and EBS volume in your AWS subscription.

Key capabilities include:

- Proactive display of CloudWatch metrics.
- The ability to start, stop and restart any EC2 instance.
- The ability to drill down into CloudWatch Alarms to review metrics and determine the root cause of failures.
- Support for all AWS regions.

VIAcode Cloud Commander is built to be used primarily on Windows 8-based tablets such as Microsoft Surface, but will operate equally well on any Windows 8-based PCs. It is available to VIAcode clients that deploy their applications using Amazon Web Services.
